EDUCATION

Covenant University | Bachelor of Computer Science

Ota, Ogun | **09/2022 - Present**

- Cumulative **GPA: 4.89/5.00**
- Member of Nigerian Association of Computing Students (NACOS) - Covenant University
- Relevant Coursework: Structured Programming, Database Management, Operating Systems

WORK EXPERIENCE

Chequebase Backend Intern

- Collaborated with the backend development team to integrate and optimize APIs, ensuring seamless communication between systems.
- Conducted usability testing and worked alongside developers to improve and optimize user interfaces, enhancing user experience and satisfaction.
- Gained hands-on experience in debugging and solving real-world backend challenges while contributing to the team's sprints and deliverables

Quidax Backend Intern

- Acquired and deepened skills in Java while working on backend development tasks in a professional environment.
- Partnered with the backend team to design, test, and integrate APIs, facilitating secure and efficient data flow for cryptocurrency-related platforms.
- Built and deployed practical projects aimed at improving technical competency in backend development and fostering an understanding of software lifecycle processes

PROJECTS

Telegram Complaint System

- Developed an advanced communication platform for managing complaints directly through Telegram, ensuring faster and more effective response rates.
- Built the backend logic with 75.1% Python for complaint handling, integrated PostgreSQL via PLpgSQL for data storage, and utilized Docker for deployment.
- Designed the frontend interface using HTML and incorporated 1.5% HCL for infrastructure setup and management. (Link [here](#))

Dynamic Portfolio

- Created a dynamic portfolio showcasing professional and personal projects, reflecting versatility in multi-language integrations.
- Developed a robust backend in Java (42.7%) while enhancing user interactivity using TypeScript (29%) and Python (23.2%).
- Implemented frontend styles with JavaScript and CSS (3% combined), creating a responsive and interactive design architecture.
- Deployed the platform using Shell scripting and other supportive toolchains (Link [here](#))

Cryptocurrency Price Ticker

- Designed and implemented a simple yet powerful platform for real-time cryptocurrency price tracking.
- Used 100% Java for comprehensive implementation and performance optimization aimed at fast and reliable updates from Quidax APIs.
- Provided an intuitive user experience to display cryptocurrency data in a user-friendly interface. (Link [here](#))

CERTIFICATIONS

- **Responsive Web Design** - freeCodeCamp, Dec 2023
- **CS50 Introduction to Programming with Python - 2024**

SKILLS

Languages: Java, Python, SQL, HTML/CSS

Technical: Docker, REST API Development, Databases, Git / Version Control, Cross-Functional, Collaboration & Collaborative Development, Analytical Problem Solving, Agile Development, Technical Documentation & Organization, Data Management & Validation, Attention to Detail

Soft: Problem-solving, Critical Thinking, Communication, Time Management, Adaptability
